Testing Stray Fund live

Neighbours fund spay and neuter for street cats. An AI treasurer decides which cat is helped next, says why, and pays the vet through PayPal, inside rules that code enforces. This guide walks you through it on the live site in about ten minutes.

The judge link
Open it once, from the private notes on Devpost. It unlocks the Caretaker and Vet roles, donating, reports and votes.

A PayPal sandbox login
Also in the private notes. Everything is PayPal sandbox: test money only.

A phone, or a desktop browser
The app is built for phones. On desktop the tabs move to the left side.

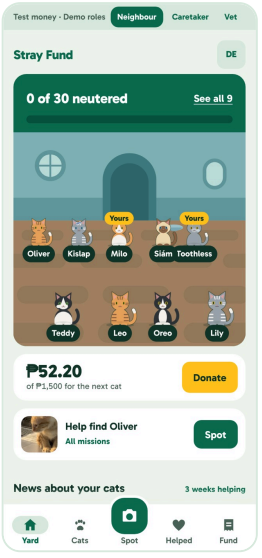

What stays hidden
Exact places. Every screen shows the area name, never where a cat was photographed.

---

1 Open the link and look around

The yard shows every cat in the barangay. The strip at the very top switches who you are: **Neighbour**, **Caretaker** or **Vet**. No password; in this demo the strip is the sign-in.

Other judges use the same live site, so you may see their cats and gifts too.

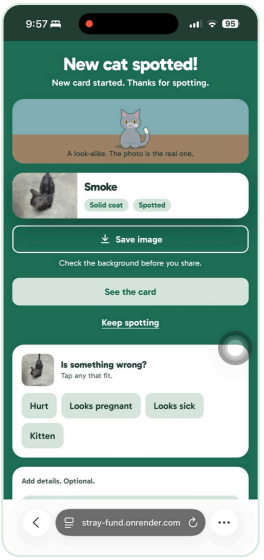

The yard, as a Neighbour

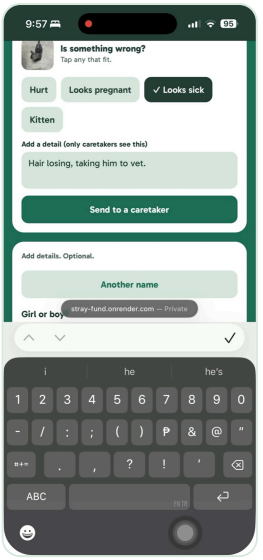

2 Spot a cat Neighbour

1. Tap **Spot** and take a photo of a cat with the live camera. Old photos from your gallery can't be used.
2. The app checks the photo: is there a cat, what's its coat, is it a cat we already know.
3. A new cat gets a card in the yard. A known one gets another sighting.
4. Under **Is something wrong?**, tap Hurt, Looks pregnant or Looks sick, and add a note. Only caretakers see the note.

These screenshots show the cat under his first name, Smoke. He's Toothless on the live site now.

New cat spotted

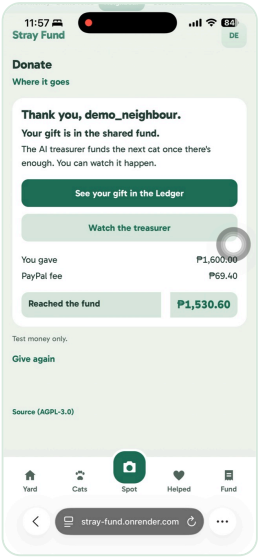

Reporting him sick, with a note

3 Give through PayPal Neighbour

1. Tap **Donate** and choose an amount. ₱1,600 is enough for one cat: after PayPal's fee it still covers the ₱1,500 care package.
2. Pay with the sandbox login from the private notes.
3. The thank-you shows what you gave, PayPal's fee, and what reached the fund.

Once the fund can cover a cat, the AI treasurer decides who goes next. That can take a minute.

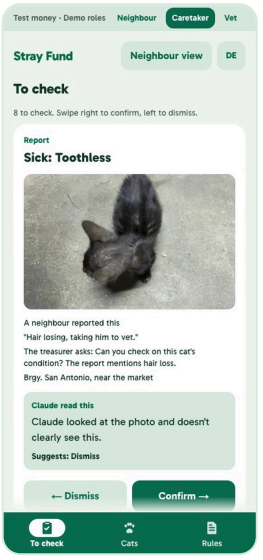

₱1,600 given, ₱69.40 fee

4 Check what neighbours reported Caretaker

Tap **Caretaker** in the strip. You land on the desk: a green bar with **To check**, **Cats** and **Rules**.

1. Each card is one decision. **Claude read this** says what the AI saw and which way it leans.
2. Swipe right for the green action (Confirm), left for the other (Dismiss), or use the two buttons.
3. Nothing is sent for 5 seconds. Tap **Undo** if you change your mind.
4. **Change something** opens the full form inside the card.

A confirmed report holds the cat back from funding until a vet clears it.

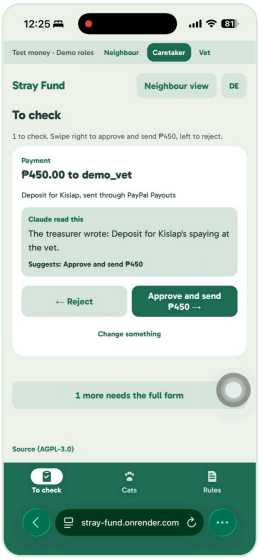

The AI leans Dismiss; the person decides

5 Approve a payment Caretaker

When the treasurer funds a cat and the vet books it, a payment card appears on To check: the amount, the vet, and the treasurer's reason.

Swipe right or tap **Approve and send**. After the 5-second Undo window, PayPal Payouts sends it, and the ledger shows it with its PayPal reference. The treasurer's tools never take an amount or a payee; code sets both. Every deposit waits for a caretaker like this. After surgery the treasurer pays the balance itself once the receipt and ear-tip are checked, and a balance over ₱2,000 waits for a person too.

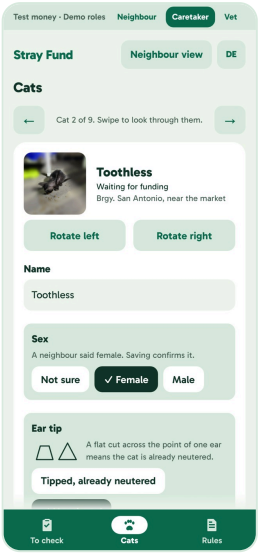

A ₱450 deposit waiting for a person

6 Fix a wrong call Caretaker

The **Cats** tab is a profile for every cat. Swipe or use the arrows to move between them. Change the name, sex, ear tip or stage, report something, then tap one **Save**.

Got something wrong? **Reopen** a report you confirmed or dismissed and it goes back on To check. A home step can go back too. What a vet cleared and money PayPal sent can't be taken back.

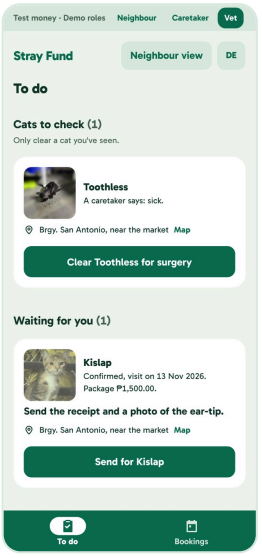

One cat's profile

7 Clear a cat and book it Vet

Tap **Vet**. **To do** lists cats a caretaker flagged, waiting for you to clear them for surgery, and cats the fund paid for, waiting for a visit date. **Bookings** lists every booking.

After surgery the vet sends a receipt and an ear-tip photo. A caretaker checks them before the balance is paid.

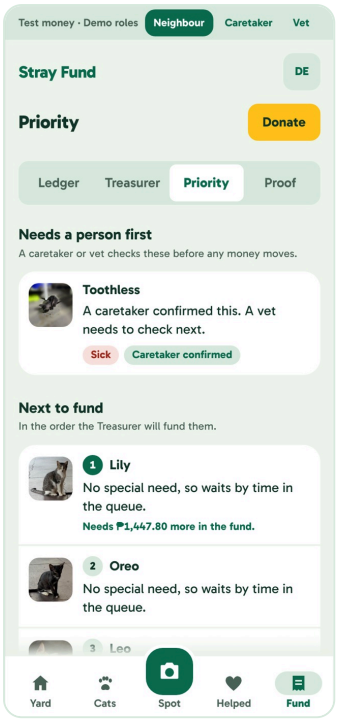

The vet's To do

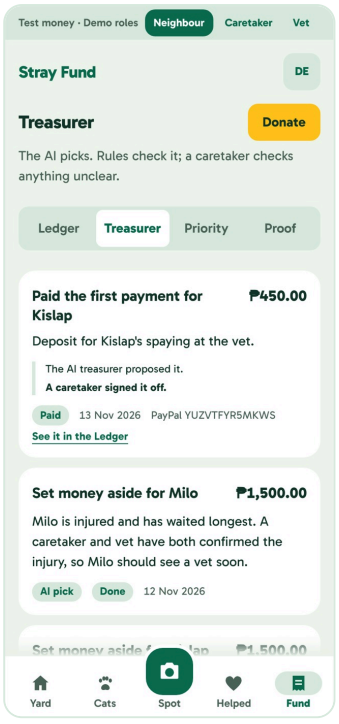

8 Follow the money Neighbour

Tap **Neighbour**, then **Fund**. Four tabs show anyone where every peso went:

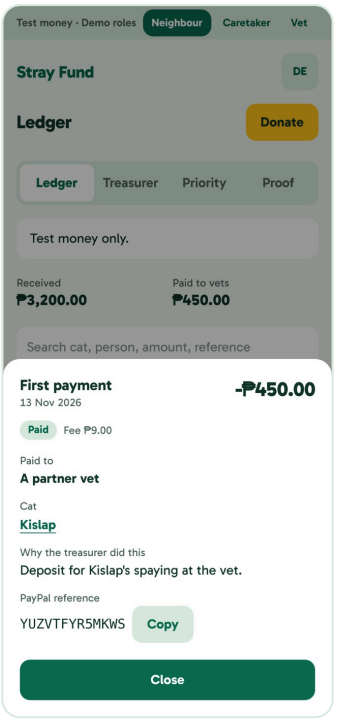

1. **Priority**: who's next, and why. Cats a person still has to check sit under *Needs a person first*.
2. **Treasurer**: every AI decision, its reason, and the PayPal reference when money moved.
3. **Ledger**: every donation and payout. Tap a row to see its PayPal reference.
4. **Proof**: the totals, which add up exactly across every donation and payout.

A ledger row, opened

Proof

If something looks stuck

The treasurer and the photo checks run in the background, so give them a minute and pull to refresh. PayPal confirms a payout about a minute after it's sent. If a page says "Open to judges during the hackathon", open the judge link again.
